

INSTRUCTION

HOW TO USE THE FONT IN MICROSOFT WORD?

1. Installation

- **Windows:** Extract the zip file, right-click the font file (OTF or TTF), and select **Install**. Restart Word so the font loads properly.
- **Mac:** Extract the zip file, open **Font Book**, click the plus button (+), select the font file, and click **Install**. You can also double-click the font file and click **Install Font**.

2. Using OpenType Features & Ligatures

- **Windows (Microsoft Word):**
 - Go to the **Home** tab, click the bottom-right arrow corner of the **Font** box to open the font settings window.
 - Switch to the **Advanced** tab.
 - Set **Ligatures** to **Standard Only** (or turn off *Contextual Alternates* if you want a more uniform look).
- **Mac (Microsoft Word):**
 - Go to the **Format** menu at the top of your screen and select **Font** (or press Cmd + D).
 - Click the **Advanced** tab.
 - Adjust the Ligatures, contextual alternates, kerning, and other OpenType settings from there.
